24/7 Automated Self-Service Solution

If your business requires providing customers and/or employees with 24/7 access to materials, products or services, an automated self-service solution can be an effective option. This type of solution allows for unattended and always-available access through secure smart cabinets

The self-service points can be deployed wherever access is needed, such as at customer job sites, warehouses, or other facilities. Transactions are securely registered and can integrate with backend systems for automated ordering, billing, or other processes. Remote management through a cloud-based portal allows for real-time oversight and control.

An end-to-end solution provider can customize the optimal configuration based on your specific business needs and integrate all required hardware, software and services. This provides a turnkey solution that is quick and easy to implement. Benefits include 24/7 availability with no staffing costs, secure controlled access, and data-driven insights for forecasting and improving operations

Key Features

Information Technology

- Automatic and real time inventory count
- Automatically assignment of purchase order or cost center
- Overview of inventory on attached touchscreen
- API integration with your systems
- Mobile data. No need for WIFI or ethernet access.
- Remote monitoring
